EXAMINER'S ACTION

Claims 1-6 are presented for examination.

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 1-6 are rejected under 35 U.S.C. § 103 as being unpatentable over Diehl (4,113,881). This reference teaches at column 1, lines 43-52 that applicant's claimed known active agent prevents the formation of poly-arthritis. The difference between applicant's claims and the teaching in the reference is that applicant's are claiming the a method of treating non-rheumatoid arthritis. However, the cited reference would have motivated the skilled artisan to use applicant's claimed method in various forms of arthritis including osteoarthritis and expect the protection taught by the reference in view of its teaching that cetyl myristoleate prevents the formation of poly-arthritis.

The amounts of active agents to be used, the pharmaceutical forms, mode of administration e.g., oral and parenterally (claims

3-6) are all deemed obvious since they are all within the knowledge of the skilled pharmacologist and represent conventional formulations and modes of administration.

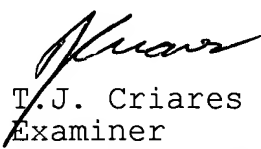

The applicant's data has been reviewed but is deemed to corroborate the teachings of the reference.

For these reasons the claimed subject matter is deemed to fail to patentably distinguish over the state of the art as represented by the cited references. The claims are therefore properly rejected under 35 U.S.C. 103.

None of the claims are allowed.
